

# SportsBuddy

This is a social media app for sport lovers

## Project description

This is a social media app created to find sport buddies. If you want to start running and don't want to do that alone you can find running buddies in the area and run together. If you want to play basketball and lack one player, you can make a post in basketball group in the app and find people who can come play with you. If you want to start exercising and need a good coach, this is app for you. We have a database of the best fitness coaches in the area to help you. We provide ratings and rates for each coach. You can also see their time availability and message them in the app. This is a social media app. You can communicate, share pictures, write reviews. It is a free app for users.

## Team

I am looking for 8-10 developers, since it is a big project that requires a lot of thinking and ideas.

## Implementation

We plan to implement the MVP using an SQL, then migrate to NoSQL once the app has a lot of users.

## SQL

open to suggestions...

## NO-SQL

open to suggestions

## Business

app is free for all users. There might be paid ads in the future.

## Operation

The founders will operate the app. Once it is succesfull it might be sold to bigger companies (either sport equipment companies or social media companies)

## **Legal**

open to suggestions...

## **Technical**

1. First we need to come up with the structure. How exactly we will organize the app to fulfill its purposes
2. Then we will design several tables for our database. One for users, another for coaches (with all of their qualifications). One more is for activities (running, walking, basketball, volleyball, etc.)
3. Choose programming languages and platforms.

## **Social**

The best way to gain an audience is by the word of mouth. Of course, we will start by advertising on popular social media platforms. Then, we can talk to companies like Nike or Adidas to get a discount for referred friends in the app.
